

Capturing Video in an Adobe Presenter Presentation

Adobe Presenter allows you to capture video in each of your **PowerPoint** slides with a webcam. Below are instructions that enable you to capture video in your **PowerPoint** slides with a webcam.

To capture video in your PowerPoint slides in **Adobe Presenter** with a webcam:

1. Open your narrated presentation in PowerPoint. Note that this step is not necessary if your presentation is already open.
2. Click the **Adobe Presenter** tab (Figure 1). The **Adobe Presenter** commands are displayed.

Figure 1

3. Click the **Capture** command (Figure 2). The **Adobe Presenter-Capture Video** dialog box opens (Figure 3).

4. Click the **Record** button (Figure 3). Your recording begins.
5. Click the **Stop Recording** button (Figure 3). The recording stops.
6. Click the down arrow for the **Attach to:** drop-down list box (Figure 3).
7. Select the slide that will contain your video (Figure 3).
8. Click the down arrow for the **As:** drop-down list box (Figure 3).
9. Select whether video will be added the slide or sidebar.
10. Click the down arrow for the **Video Device** drop-down list box (Figure 3).
11. Select a video capture device from the video. Note that your video capture device may already be visible.
12. Click the down arrow for the **Size** drop-down list box (Figure 3).
13. Select a size for your video. You may choose to use the default setting.
14. Click the down arrow for the **Quality** drop-down list box (Figure 3) for the video.
15. Select the desired quality for your video. You may choose to use the default setting.
16. Click the down arrow for the **Audio Device** drop-down list box (Figure 3).
17. Select your audio device.
18. Click the **Quality** drop-down list box (Figure 3) for the audio.
19. Select the desired quality.
20. Click the **OK** button. The video is added to the slide or sidebar.
